CERTIFICATE

This is to certify that the report titled “**Industrial Visit to Kalyani Technoforge, Mundhwa, Pune**” has been successfully prepared and submitted by the students of Second Year B.Tech(IT), Semester IV, during the academic year 2025–2026.

The report has been prepared as a part of the Ability Enhancement Course at D. Y. Patil College of Engineering, Akurdi, Pune.

This report represents the students’ group effort in studying and understanding the industrial processes, manufacturing techniques, and operational practices followed at **Kalyani Technoforge, Mundhwa, Pune**. The students gained practical exposure to forging processes, production workflow, quality control, and safety measures adopted in the industry.

To the best of our knowledge, the work presented in this report is original and has been completed under the guidance and supervision of the course teacher. This report fulfills the academic requirements prescribed for the subject.

Course Teacher

Mrs. Swati Jadhav

ACKNOWLEDGEMENT

We take this opportunity to express our sincere gratitude to everyone who contributed to the successful completion of this report on the industrial visit to **Kalyani Technoforge, Mundhwa, Pune**.

We are highly thankful to our respected course teacher, **Mrs. Swati Jadhav**, for his constant guidance, motivation, and valuable suggestions throughout the preparation of this report. His support helped us in gaining a deeper understanding of industrial concepts and in presenting the report in a systematic and effective manner.

We would like to express our heartfelt appreciation to the management and technical staff of **Kalyani Technoforge** for granting us permission to visit their organization. We are grateful for the opportunity to observe real-time industrial operations and for the detailed explanation provided regarding forging processes, machinery used, production workflow, quality control systems, and safety measures. The interaction with industry professionals gave us practical insights that cannot be gained through textbooks alone.

We also sincerely acknowledge the initiative taken by our team members in organizing and coordinating this visit independently. Their efforts in planning, communication, and execution made this visit possible and successful. The teamwork, cooperation, and active participation of all group members played a significant role in collecting relevant information and compiling this report efficiently.

This industrial visit has been a valuable learning experience for us, as it enhanced our understanding of how theoretical knowledge is applied in real-world industrial environments. It also helped us develop a better perspective on industrial management, production efficiency, and workplace discipline.

Finally, we extend our gratitude to all individuals who directly or indirectly contributed to the successful completion of this report.

INTRODUCTION

The industrial visit was conducted at **Kalyani Technoforge, Mundhwa, Pune**, a well-known organization engaged in the manufacturing of forged and precision-machined components. The company is a part of the reputed Kalyani Group and is recognized for its advanced manufacturing capabilities and global presence in the engineering sector.

Reason for Selecting this Organization

This organization was selected for the industrial visit due to its strong reputation in the forging industry and its use of modern manufacturing technologies. As engineering students, visiting Kalyani Technoforge provided an opportunity to understand real-time industrial processes, especially in metal forming and machining. The company's expertise, large-scale production, and use of advanced machinery made it an ideal place for gaining practical exposure.

Type and Nature of the Organization

Kalyani Technoforge is a manufacturing-based organization specializing in forging and precision machining. The company produces high-quality forged components using processes such as hot forging, warm forging, cold forging, and aluminum forging. It also includes operations like heat treatment, tool and die making, and quality inspection. These components are widely used in industries such as automotive, engineering, and industrial applications, making the organization an important part of the manufacturing sector.

Expected Learning Outcomes from the Visit

The industrial visit was expected to provide practical knowledge and exposure to real-world industrial environments. The key learning outcomes include understanding the forging process and its different types, gaining knowledge about industrial machinery and production workflow, and learning about quality control techniques and safety measures followed in industries. Additionally, the visit aimed to enhance our understanding of how theoretical concepts are applied in practical situations and to develop awareness about professional work culture and industrial practices.

VISION AND MISSION OF ORGANIZATION

Vision of the Organization

- To become a globally recognized and technologically driven company
- To establish itself as a trusted brand in international markets
- To achieve sustainable growth with innovation and advanced manufacturing
- To contribute towards a green, safe, and environmentally friendly future
- To maintain leadership through quality, excellence, and continuous improvement

Mission of the Organization

- To deliver high-quality products that meet global standards
- To focus on customer satisfaction through fast response and reliable service
- To encourage innovation and continuous improvement (TPM & Industry 4.0 practices)
- To build a strong workforce by promoting respect, trust, and employee development
- To expand globally through strong business relationships and market positioning
- To ensure efficient processes, profitability, and sustainable operations
- To contribute positively to society and the environment

ORGANIZATION DETAILS

The organization visited was **Kalyani Technoforge, located in Mundhwa, Pune, Maharashtra, India.** The company is situated in one of Pune's well-developed industrial zones, which offers excellent infrastructure, connectivity, and access to resources. Pune is widely recognized as a major hub for automotive and engineering industries, making it a strategic location for manufacturing companies like Kalyani Technoforge. The location also supports efficient logistics, supply chain management, and availability of skilled manpower, all of which contribute to the company's smooth operations.

What They Do

Kalyani Technoforge is primarily engaged in the manufacturing of high-quality forged and precision-machined components. The company specializes in transforming raw metal into durable and high-strength components through advanced forging techniques. Forging is a critical manufacturing process used to improve the mechanical properties of metal, making the components stronger and more reliable.

The company's core areas of specialization include:

- **Hot Forging:** Heating metal to high temperatures and shaping it using dies and presses.
- **Warm Forging:** A process carried out at intermediate temperatures for improved precision and reduced energy consumption.
- **Cold Forging:** Performed at room temperature, offering high dimensional accuracy and surface finish.
- **Heat Treatment:** Processes such as hardening and tempering to improve strength and durability.
- **Tool and Die Manufacturing:** Designing and producing molds used in forging operations.
- **Quality Inspection and Testing:** Ensuring products meet strict quality standards using modern inspection techniques.

The company manufactures components used in various sectors such as:

- Automotive Industry (major sector)
- Industrial machinery and equipment
- Engineering and heavy industries

Their products include gears, shafts, flanges, and other critical mechanical parts, which require high precision and strength. The company is known for maintaining high quality standards, reliability, and consistency in its production.

Type of Organization

Kalyani Technoforge is a private limited company and a part of the reputed Kalyani Group, which is a globally recognized industrial group in India. It is classified as a medium-to-large scale manufacturing enterprise with modern infrastructure and advanced technological capabilities.

As a private organization, the company focuses on:

- Profitability and growth
- Innovation and adoption of new technologies
- Maintaining international quality standards
- Customer satisfaction and global competitiveness

The company operates with a structured management system that includes different departments such as production, quality control, maintenance, logistics, and administration. It follows industry standards and certifications to ensure product quality and operational efficiency.

Additionally, the organization emphasizes:

- Continuous improvement in manufacturing processes
- Workplace safety and employee training
- Efficient resource utilization and sustainability practices

Overall, Kalyani Technoforge represents a well-established industrial organization that combines traditional forging techniques with modern technology, making it a significant contributor to the engineering and manufacturing sector.

ORGANIZATIONAL STRUCTURE

Roles and Responsibilities of key personnel: -

1. Managing Director (MD) – Mr. Ravi Nagarkar

- Provides overall leadership and strategic direction to the company
- Makes major business decisions and policy approvals
- Ensures organizational growth, profitability, and sustainability
- Represents the company at national and international levels
- Oversees performance of all departments and top executives

2. Director – Mr. Sanjeev Jagtap

- Supports the MD in executing company strategies
- Supervises operational and administrative functions
- Ensures coordination between different departments
- Monitors company performance and reports to the MD
- Involved in decision-making for expansion and improvements

3. President – Mr. Deepak Kalshetti

- Responsible for day-to-day business operations
- Implements policies and strategies decided by top management
- Coordinates with department heads for smooth functioning
- Ensures productivity, efficiency, and quality standards
- Acts as a bridge between top management and middle-level executives

4. AVP (International Business Development) – Mr. Vinod Garud

- Identifies and develops international business opportunities
- Builds relationships with global clients and partners
- Expands company presence in foreign markets
- Handles export strategies and global sales growth
- Conducts market research for international expansion

5. Vice President (Purchase) – Mr. Anant Pethkar

- Manages procurement of raw materials and resources
- Ensures cost-effective and timely purchasing decisions
- Maintains relationships with suppliers and vendors
- Monitors inventory levels and supply chain processes
- Ensures quality and compliance in procurement activities

6. Chief HR Officer – Mr. Makarand Kotalwar

- Manages recruitment, training, and employee development
- Develops HR policies and ensures compliance
- Handles employee relations and workplace culture
- Oversees performance management and appraisal systems
- Ensures employee satisfaction, safety, and retention

OBSERVATION OF COMMUNICATION PRACTICES

During the industrial visit to Kalyani Technoforge, Mundhwa, Pune, we observed that communication is a key factor in ensuring smooth and efficient industrial operations. The nature of work in a manufacturing environment demands fast, accurate, and well-coordinated communication, which was clearly reflected in the day-to-day activities of the employees.

How Employees Communicate with Each Other

Communication among employees is primarily work-focused, clear, and hierarchical. On the shop floor, workers communicate directly with their immediate supervisors for instructions, reporting progress, and resolving issues. Supervisors further coordinate with higher management to ensure smooth execution of production tasks.

The communication style is mostly short and precise, avoiding unnecessary conversation due to the fast-paced and sometimes hazardous working environment. Employees also rely on repeat confirmations to ensure instructions are correctly understood, which helps in minimizing errors and maintaining quality standards.

Observation of Skills Used in Communication

Several important communication-related skills were observed during the visit:

- Clarity and precision in conveying instructions to avoid mistakes in production
- Active listening and quick understanding, especially in technical discussions
- Technical communication skills, involving machine operations and process-related terminology
- Coordination and teamwork, essential for synchronized operations across departments
- Problem-solving communication, where workers immediately inform supervisors about issues

It was evident that practical communication skills and real-time decision-making abilities are more important than theoretical communication in such an industrial setup.

Communication with Customers/Clients

Communication with customers and clients is handled in a formal and professional manner. The company uses clear, structured, and business-oriented language in all external communications. This includes formal emails, technical documentation, reports, and business meetings.

The use of formal English ensures clarity, avoids misunderstandings, and helps maintain a professional image in the global market. This type of communication is mainly handled by administrative and management departments rather than shop floor workers.

Types of Communication Used

- Verbal Communication:

Verbal communication is the most dominant form within the organization. It is used for giving instructions, coordinating tasks, discussing issues, and managing workflow. Due to the dynamic nature of industrial work, verbal communication helps in quick decision-making and immediate action.

- **Non-Verbal Communication:**

Non-verbal communication plays a crucial role, especially in noisy areas where machines are operating continuously. Workers use hand gestures, eye contact, head signals, and body movements to convey messages. The tone of voice is also important, especially in situations requiring urgency or caution. Safety signs and symbols are also a form of non-verbal communication widely used across the plant.

Written/Digital Communication:

Written communication is mainly used for official documentation, reporting, and record-keeping. Emails, production reports, maintenance logs, and digital systems are used to maintain accuracy and traceability. This ensures proper documentation of all activities and supports decision-making at higher levels.

Communication Methods

The organization uses a combination of traditional and modern communication methods:

- Face-to-face interaction for immediate instructions and coordination
- Telephonic communication for inter-departmental coordination and urgent updates
- Computer-based systems for emails, reports, and production data management
- Display boards and signages for instructions, safety guidelines, and process flow
- Alarms and indicators to signal warnings or operational status of machines

OBSERVATION OF SOFT SKILLS

During the industrial visit to Kalyani Technoforge, Mundhwa, Pune, we observed that along with technical expertise, soft skills play a crucial role in ensuring efficient operations and a productive work environment. Employees demonstrated a combination of interpersonal and professional skills that contribute to the overall success of the organization.

Teamwork

Teamwork was one of the most prominent soft skills observed during the visit. Employees worked in a coordinated and collaborative manner, especially on the shop floor where multiple processes are interconnected. Workers, supervisors, and technicians supported each other to ensure smooth workflow and timely completion of tasks. Each individual clearly understood their role within the team, which helped in minimizing errors and maintaining efficiency.

Leadership

Leadership qualities were mainly observed among supervisors and managers who were responsible for guiding and monitoring the workers. They provided clear instructions, motivated employees, and ensured discipline in the workplace. Effective leadership was reflected in how tasks were assigned, how issues were handled, and how teams were managed during production processes.

Time Management

Time management is critical in a manufacturing environment, and it was evident that the organization follows strict schedules and deadlines. Employees efficiently managed their time to ensure that production targets were achieved without delays. Processes were well-planned, and tasks were executed in a systematic manner to maintain productivity and avoid wastage of time.

Professional Etiquette

Professional behavior was consistently maintained throughout the organization. Employees followed discipline, respect, and proper conduct while interacting with each other. They adhered to workplace rules, safety guidelines, and organizational protocols. Respect for hierarchy and maintaining a formal approach in communication reflected strong professional etiquette.

Problem-Solving Skills

Problem-solving skills were clearly visible when employees encountered issues related to machinery or production. Workers immediately reported problems to supervisors, and quick decisions were made to resolve them. The approach was practical and solution-oriented, ensuring minimal disruption in the workflow.

Listening Skills

Effective listening was another important skill observed during the visit. Employees paid close attention to instructions and guidance, especially in critical operations. Active listening helped in reducing misunderstandings, improving coordination, and ensuring that tasks were performed accurately and safely.

Additional Observations

Apart from the above skills, employees also demonstrated:

- Adaptability, by adjusting to different tasks and situations
- Responsibility, by taking ownership of their work
- Discipline, by following rules and maintaining order in the workplace

INTERACTION WITH HR AND STAFF

During the industrial visit to Kalyani Technoforge, Mundhwa, Pune, we had the opportunity to interact with both the technical staff members and the Human Resource (HR) department. This interaction was highly informative and helped us gain deeper insights into the working of the organization, employee management, and industrial practices.

Conversation with Staff Members

We interacted with shop floor workers, supervisors, and technical staff who explained the forging process, machine operations, and workflow in detail. They shared their practical experiences and guided us through different stages of production.

Questions Asked and Responses

Q1: What type of forging processes are used in your company?

Answer: The staff explained that the company mainly uses hot forging, warm forging, and cold forging depending on the type of component and material requirements. Each process is selected based on the strength, precision, and application of the product.

Q2: What safety measures are followed in the plant?

Answer: They mentioned that safety is a top priority. Workers are required to wear Personal Protective Equipment (PPE) such as helmets, gloves, safety shoes, and goggles. Regular safety training and strict guidelines are followed to prevent accidents.

Q3: How do you maintain quality in production?

Answer: Quality is maintained through continuous inspection and testing at different stages of production. Advanced machines and quality control techniques are used to ensure that products meet required standards.

Q4: What challenges do you face during production?

Answer: Some common challenges include machine maintenance issues, high-temperature working conditions, and meeting production targets within deadlines. However, these are managed through proper planning and teamwork.

Interaction with HR Department

We also had a brief interaction with the HR representative, who provided insights into employee management, recruitment, and work culture in the organization.

Questions Asked and Responses

Q5: What skills are important for students to work in this industry?

Answer: The HR emphasized that along with technical knowledge, students must have good communication skills, teamwork ability, problem-solving skills, and a positive attitude. Practical knowledge and willingness to learn are also very important.

Q6: How does the company ensure employee development?

Answer: The company provides training programs, skill development sessions, and on-the-job learning opportunities to enhance employee performance and growth.

Q7: What is the work culture like in your organization?

Answer: The HR described the work culture as professional, disciplined, and performance-oriented, with a strong focus on teamwork and continuous improvement.

Q8: Are there opportunities for freshers or interns?

Answer: Yes, the company provides opportunities for freshers and interns, especially for engineering students, depending on requirements and performance.

What We Learned from the Interaction

The interaction with staff and the HR department at Kalyani Technoforge, Mundhwa, Pune provided valuable insights into both the technical and professional aspects of the organization. It helped us understand how industrial operations are carried out in a real-world environment and how different departments work together to achieve organizational goals.

From this interaction, we learned about the real-time application of forging processes and industrial operations, where theoretical concepts such as metal forming, heat treatment, and machining are practically implemented on a large scale. We also understood the importance of safety measures and quality control, as even a small mistake in manufacturing can lead to defects or accidents. The use of proper safety equipment, regular inspections, and strict quality standards ensures both product reliability and worker safety.

We gained a clear understanding of the skills required to succeed in the industrial sector, which include not only technical knowledge but also soft skills such as communication, discipline, problem-solving ability, and a positive attitude. The HR discussion emphasized that industries prefer candidates who are adaptable, responsible, and willing to learn continuously.

Apart from the above, the interaction provided deeper insights such as:

- Understanding the organizational hierarchy and how different levels of management function
- Awareness of industrial discipline and work ethics, including punctuality and responsibility
- Exposure to real workplace challenges and how professionals handle them efficiently
- Importance of practical knowledge over purely theoretical understanding
- Knowledge about career opportunities, internships, and industry expectations
- Understanding how time management and productivity are maintained in large-scale industries
- Insight into the use of modern technology and automation in manufacturing processes

Overall, this interaction significantly enhanced our understanding of how an industry operates. It provided us with practical exposure, professional awareness, and career guidance, which will be highly beneficial for our future in the engineering field. It also helped us build confidence and develop a clearer vision of the skills and knowledge required to succeed in the industrial environment.

LEARNING OUTCOMES

What We Learned about Communication

- Communication in industry is clear, precise, and task-oriented
- Importance of verbal communication for instructions and coordination
- Use of non-verbal communication (gestures, signals) in noisy environments
- Role of written/digital communication for reports and documentation
- Importance of active listening to avoid errors
- Communication helps in improving efficiency, safety, and productivity

What We Learned about Soft Skills

- Importance of teamwork for smooth workflow
- Role of leadership in managing teams and tasks
- Need for time management to meet production targets
- Value of professional etiquette such as discipline and respect
- Importance of problem-solving skills in handling real-time issues
- Significance of listening skills for proper understanding
- Other key skills: adaptability, responsibility, and positive attitude

How It Relates to Personal or Academic Growth

- Helped in connecting theoretical knowledge with practical applications
- Improved understanding of real industrial working
- Enhanced communication and interpersonal skills
- Developed confidence and professional awareness
- Gained knowledge about industry expectations and work culture
- Motivated for continuous learning and skill development
- Helped in preparing for future engineering careers

Additional Learning Outcomes

- Understanding of industrial workflow and coordination
- Awareness of safety practices and their importance
- Exposure to real-time problem-solving
- Importance of discipline and responsibility in professional life

CONCLUSION

The industrial visit to Kalyani Technoforge, Mundhwa, Pune was a highly informative and enriching experience. It provided us with an opportunity to observe real-time industrial operations and understand how theoretical concepts are applied in practical situations. The visit helped us gain valuable knowledge about forging processes, manufacturing techniques, quality control, and safety practices followed in the industry.

Overall, the experience was very beneficial as it gave us exposure to the actual working environment of a manufacturing organization. We were able to understand the importance of teamwork, communication, discipline, and time management in achieving efficiency and productivity. The interaction with staff and HR further enhanced our understanding of industry expectations, required skills, and professional behavior.

This visit proved to be useful in bridging the gap between academic learning and industrial practices. It helped us develop a clearer perspective on our future careers by highlighting the importance of both technical knowledge and soft skills. It also motivated us to focus on continuous learning and skill development to become industry-ready professionals.

In conclusion, the industrial visit was a valuable learning experience that enhanced our practical knowledge, confidence, and professional awareness, making it an important part of our academic journey.
